

Jamaica

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Jamaica GYTS includes data on prevalence of Cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Jamaica could include in a comprehensive tobacco control program.

The Jamaica GYTS was a school-based survey of Students in grades 7-13, conducted in 2001. A two-stage

cluster sample design was used to produce representative data for all of Jamaica. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 86.5%, and the overall response rate was 86.5%. A total of 1742 students participated in the Jamaica GYTS.

Prevalence

- 33.8% of students had ever smoked cigarettes (Male = 39.3%, Female = 28.9%)
- 19.0% currently use any tobacco product (Male = 24.1%, Female = 14.7%)
